SOLAR CHARGER

TO CHARGE:

BY PLUGGING CHARGER IN

› Flip down the protective plastic cover on the top of the solar charger and plug in the provided micro USB charging cord into the center port.

› The blue lights will indicate the charge level. At full charge, all 5 lights will be blue and NOT blinking.

› Once connected, insert the USB end into any USB accepting charger and plug into the wall.

BY SOLAR POWER

› Leave the charger solar-face up in direct sunlight. The sunlight will charge the battery at a slower rate than charging by plugging the unit in.
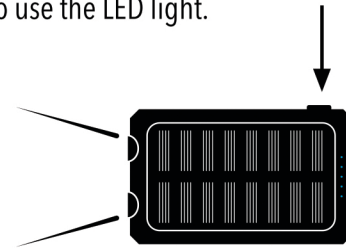

TO USE:

› When charged, plug in up to two electronic devices via the 2 USB ports located on either side of the micro-USB charging port.
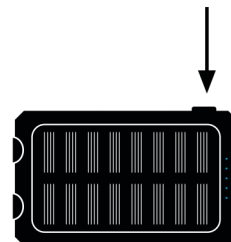

› Once the electronic device is plugged into the solar charger, charging will begin immediately.

› Hold down the power button on the top left side of the charger to use the LED light.

› Holding the power button down will turn the light off.

› A single push of the power button will illuminate the lights and indicate how much batter life is left.
